1. SAMEPAGE PLAN

The SamePage PLAN online planner is the portal for managing your music library, setting playlists and scheduling your musicians and band members. Compatibility with most graphic and text file types including PDF, DOC, RTF, JPEG, and scanned images means you can manage your entire library digitally thus eliminating copying and filing of paper documents. SamePage PLAN also provides a secure , online backup of your library. The SamePage Performance Stations automatically sync with the PLAN module, keeping all of your information up to date and ready to use in planning, rehearsal and performance.

2. AUDIENCE/CONGREGATIONAL DISPLAY/IMAG

SamePage integrates with presentation software providing unprecedented and seamless communication of pre and "on-the-fly" planning. As you load songs in your SamePage playlist, that same playlist is automatically loaded in to the presentation script. This integration also allows two-way "text messaging" between the front of house and tech booth.

3. SAMEPAGE MIX

Addition of the SamePage MIX module gives each musician access to a 16- channel stereo Personal Monitor Mix controlled directly from the SamePage Performance Station. MIX is expandable and scalable to fit any size board – just add more Performance Stations as needed. MIX can even automatically save a mix for each song. Headphones or IEMs attach directly to the Performance Station.

4. MEDIA DISPLAY TERMINAL/CONFIDENCE DISPLAY

The SamePage MDT provides the option of rear-wall projection of the SamePage Display, allowing front-line singers and musicians to see songs, playlists, and messages in real time. The MDT is also compatible with any VGA monitor for front-of-stage confidence displays and monitors.

5. SAMEPAGE PLAY

The SamePage Performance Stations provide a touch-screen interface for managing and distributing content to each musician and singer. The band leader/music director has total control over the playlist and song flow while each musician can view and control customized individual content including content including transposition, capo, and touch-screen annotation. Communication/messaging is provided between Performance Stations and all stations are "synced" via the SamePage network keeping everyone together.
